## **Isolating Spark Gap**

| Ref.   | P8770A   |
|--|--|
| Application                                  | to indirectly connect a system<br>lightning protection to a nearby metallic<br>part, when a direct connection is not<br>not admissible for functional reasons. |
| Lightning impluse current (10/350µs)<br>Iimp | 100 kA   |
| ISG classification                           | н  |
| Power frequency sparkover voltage            | < 2,5 kV (50Hz)  |
| Lightning impulse sparkover voltage          | < 5 kV   |
| Operating temperature                        | -20°C +80°C  |
| Degree of protection                         | IP 65  |
| Housing                                      | Steel with encapsulated plastic coating  |
| Weight                                       | 195 g  |
| Standard                                     | EN 62561-3   |
